

Always Compliant and Up-To-Date: By implementing Shai as your Artificial Intelligence (AI) solution, you can always be sure your organization adheres to the latest regulations, mitigating and even removing risk.

shai

Have 100% confidence that your organization incorporates and meets all financial regulatory guidelines, such as those outlined by the Sarbanes-Oxley Act.

Take advantage of an AI solution that remains vigilant 24/7 on identifying, reporting, and blocking any information security system breaches.

Ensure every step of the Risk Management Framework is followed as you build new systems, onboard vendor partners, or upgrade platforms.

With the field of technology continuing to move forward every day, it can be difficult to keep the pace within your organization. Out-of-date systems and software can be non-compliant with legislation, incompatible with critical vendor partners, or be vulnerable to outside data breaches. Any changes you're required to make can also be costly and time consuming to implement company-wide.

As a highly effective compliance tool, NCI's AI solution Shai is easily updated to follow the latest rules and regulations, while also monitoring your current practices. This positions Shai well to keep you in compliance and identify areas where you may be non-compliant so you can create solutions before they become issues.

Specific compliance use cases for Shai include:

- Complying with all banking, tax, and accounting regulations
- Automatic system updates as new legislation is passed
- Ongoing analysis and assessment of information security threats
- Clear guidelines to achieve the most efficient upgrade paths

Navigate, Collaborate, Innovate

NCI is a leading provider of enterprise solutions and services to U.S. defense, intelligence, health and civilian government agencies. We have the expertise and proven track record to solve the most important and complex mission challenges through technology and innovation.
